

ELEVATE YOUR TEST DATA SECURITY & DATAOPS

Managing your data in the lower environments is critical to software delivery success & compliance.

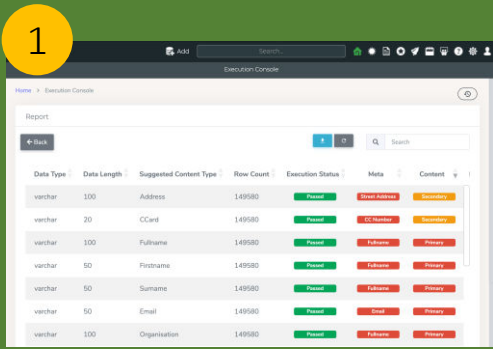

Poor management can lead to environment delays, quality issues, and security risks.

Advance with Enov8: Fast-track your deliveries with enhanced governance and insights for your IT platforms, data, and release processes.

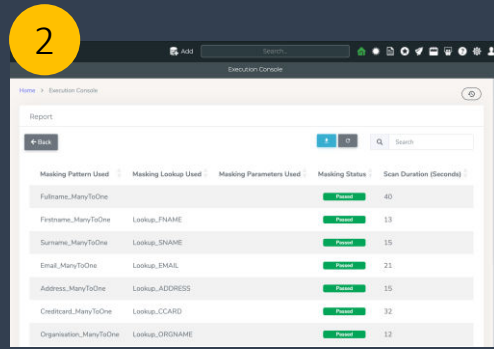

Innovate with Enov8!

Data Profiling

Analyze and profile your data across your environments and systems, ensuring you understand its structure, patterns, and risk sensitivities.

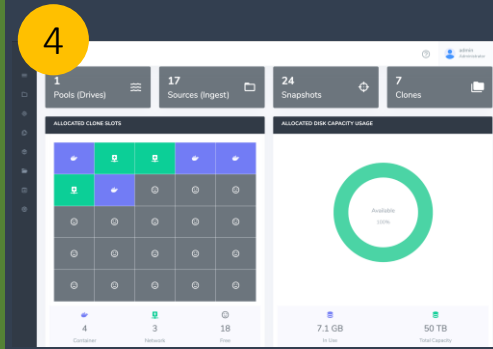

Data Masking

Secure sensitive information with powerful masking techniques, ensuring compliance with data privacy regulations while maintaining data usability.

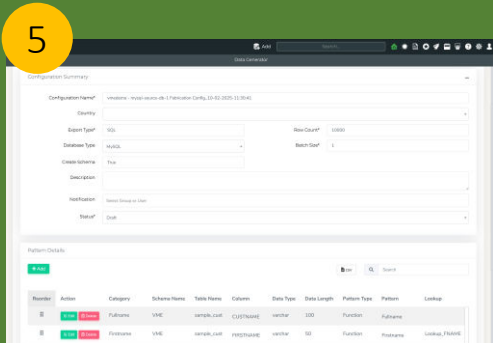

Data Validation

Confirm that your solution is secure and compliant with privacy obligations, ensuring adherence to data protection regulations.

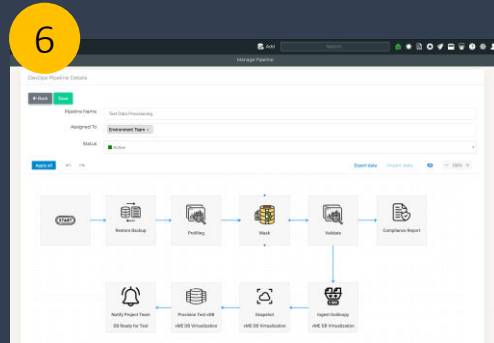

DB Virtualization

Leverage DB Virtualization technology to quickly snapshot & provision “inexpensive” (tiny) copies of your data to Dev, Test & Production Support.

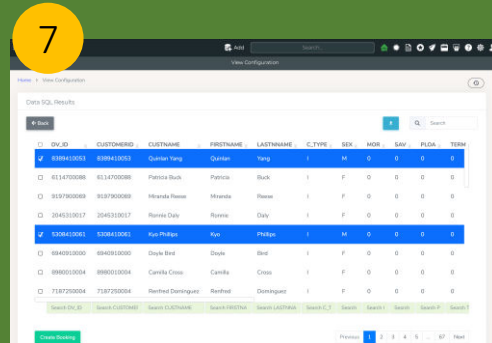

Data Generation

Supplement your production-like data with synthetic data that mimics new scenarios, enabling comprehensive testing of new features.

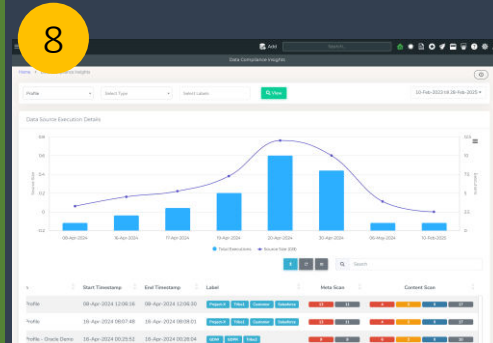

Data Pipeline

Automate the flow of data through your environments, ensuring continuous and efficient delivery of test data for DevOps processes.

Mine & Book

Streamline testing by rapidly mining fit-for-purpose data sets, easily downloading data collections for test automation, and booking data to avoid contention.

Information Walls:

Tailor executive dashboards to display key information about your Platforms, Data, Operations, Security and Compliance Objectives.
