

Release Manager

The enov8 release management platform allows enterprises to better understand & manage their complex software releases & dependencies on the end-to-end IT fabric through a centralised portal.

Product Features

Release Planning, Milestones & Gates

Implementation Planning

Release Request Management

Release Scheduling

Post Implementation Review (PIR)

Release Runbooks

Deployment Automation

Tracking

Version Deployment

ITSM & DevOps Integration

Self Service Gateway

Dashboards & Reporting

www.enov8.com

Enov8 has flexible hosting options and is available On-Premise or as SaaS.

Benefits:

•

- Release visibility
- Release governance
- Operational standardization
- Agile operations via automation
 - Cross project & team collaboration
- Faster project delivery

The Platform Captures:

- Implementation day planning
- Operational standardization
- Release automation
- Real-time deployment
- Version analytics

With Enov8 Release Manager, projects & programs can align & collaborate more effectively through early identification of system contention and team slippage.

Release Planning

Understand & manage the release pipeline across the organisation.

Ensuring synergies across the project teams via overarching milestones & gates.

System Planning & Contention Analysis

Identify system needs early in the project lifecycle. Pre-empting potential conflicts and bottlenecks due to resource contention.

Reducing development & test disruption by managing the system instance resources effectively across the different project testing phases.

Deployment & Operations Scheduling

Ensure releases are provisioned and configured in a consistent & timely fashion through proactive planning & coordination.

Centralised calendaring ensures full visibility of across projects, teams, systems and environments.

Streamlined Release Operations

Move away from chaotic and non-repeatable deployment operations by establishing control through centralised release runbooks and leveraging automation on regular & time consuming tasks.

Seamless Integration for Tools & Data Sources

Enov8's flexible integration hub simplifies moving between tools to capture data or orchestrate environment tasks.

This includes tools across monitoring, DevOps, infrastructure, data and deployment & versioning.

Release & Deployment Status & Reporting

Consolidate environment, operations & release information to allow real-time analytics, timely decision making & continuous improvement.

Executive dashboarding to highlight release status and milestone progress to gain business alignment.

Delivery Chain Insights

Visualise your key delivery chain activities (from branch code commits through to build, deployment and testing) and rapidly troubleshoot breakage through our unique delivery thread analysis features.

Post Implementation Reviews (PIRs)

Reflect and optimize your project and delivery behaviour. Implement PIRs at the end of your projects to evaluate whether project objectives were met, how effectively the project (or activities) were run, and collaborate on how to improve in the future.

Release Financial Dashboards

Use Enov8 to record IT financial information and promote IT cost optimization.

Capture and measure enterprise release costs over time.

Drill down to display and compare project costs (planned, unplanned), resource usage (systems, developers, testers), cost of events, and impact of unplanned outages.

enov8

Who is it for?

Enov8 Release Manager supports anyone involved in release and deployment activities.

This includes:

- Enterprise release management
- Project management office
- Deployment management teams
- Application teams

- Infrastructure teams
- Data / test data teams
- Test environments management
- Production & non-production support

Scope

The Enterprise Release spectrum.

enov8 are the market leader in test environment, release and holistic test data management solutions. Our unique platform powered by the ecosystem extensible engine transforms the way an organisation conducts their test environment management and release operations. By automating manual processes, better promoting existing toolchains and providing a single unified view of the IT fabric, an organisation can deliver projects faster, provide decision making insight and align IT operations with business goals.
